

FF-920 Product Data

ForgeFold 920 forward-fold basketball backstop - representative product data.

Product intent

The fictional ForgeFold 920 demonstrates the information normally coordinated for a ceiling-suspended basketball backstop. Final geometry, supports, attachment loads, controls, clearances, and installation requirements would be project-engineered.

Model	FF-920
CSI section	11 66 23 - Gymnasium Equipment
Applications	K-12 competition gyms, municipal fieldhouses, college recreation
Attachment height	18-36 ft project-configured
Backboard	72 x 42 in clear glass concept
Operation	115 V electric winch concept
Frame finish	Powder coat, 12 standard colors
Estimated ship weight	1,180-1,620 lb by configuration
Typical lead time	12-16 weeks after approved submittals

Coordination checklist

- + Confirm playing-line and backboard locations
- + Coordinate supporting structure and attachment elevations
- + Review folded position against lights, ducts, sprinklers, and other equipment
- + Coordinate power, key controls, and emergency procedures
- + Verify service access and installation path
- + Complete project-specific engineering and approved submittals before fabrication

Common options

- + Manual or powered height adjustment
- + Safety strap monitoring
- + Shot-clock support
- + Custom frame color
